Bc 47
✓ | Plaster cast of female pelvis.
From a child; symmetrical
flattening; bilateral sacro-iliac
ankylosis; left lumbar scoliosis;
femoral necks deformed. Rachitic | Purchased

Cat. Dec. 9, 1890. |
| 10084
Bc 47
✓ | Plaster cast of a female pelvis -
adolescent; symmetrical flattening;
right sacro-iliac ankylosis; marked
sacro-caecygeal curve; left lumbar
scoliosis; hypertrophy of trachanters.
Rachitic | Do.

Cat. Dec. 9, 1890. |
| 10085
Bc 47
✓ | Plaster cast of female pelvis -
adolescent; symmetrical flattening;
protuberance of ischiatic planes into
pelvic cavity. Rachitic. | Do.

Cat. Dec. 9, 1890. |
| 10086
Bc 47
✓ | Plaster cast of female pelvis -
adolescent; symmetrical flattening;
bilateral sacro-iliac ankylosis;
femurs distorted. | Do.

Cat. Dec. 9, 1890. |
| 10087
Bc 47
✓ | Plaster cast of female pelvis -
Adult - nearly symmetrical
flattening; bilateral sacro-iliac
ankylosis; left lumbar scoliosis. | Do.

Cat. Dec. 9, 1890. |

10088 Bc 47 ✓	Plaster cast of female pelvis - adolescent; unsymmetrical flattening; bilateral sacro-iliac ankylosis, nearly complete; nearly complete ankylosis of 5th lumbar vertebra to sacrum; left lumbar scoliosis; femurs much distorted.	Purchased
		Cat. Dec. 9, 1890.
10089 Bc 47 ✓	Plaster cast of female pelvis - about adult age; unsymmetrical flattening; oval-oblique pelvis; left lumbar scoliosis; distorted femurs.	Do.
		Cat. Dec. 9, 1890.
10090 Bc 47 ✓	Plaster cast of female pelvis - adolescent; nearly symmetrical flattening; nearly complete ankylosis of 5th lumbar vertebra and sacrum; left lumbar scoliosis.	Do.
		Cat. Dec. 9, 1890.
10091 Bc 47 ✓	Plaster cast of female pelvis - From a child; unsymmetrical flattening; right lumbar scoliosis; femurs much distorted. Very rachitic.	Do.
		Cat. Dec. 9, 1890.
10092 Bc 47 ✓	Plaster cast of female pelvis - adolescent; oval-oblique flattening; atrophy of right side of sacrum; dorso-lumbar kyphosis.	Do.
		Cat. Dec. 9, 1890.

10093 BC 47 ✓	Plaster cast of female pelvis - adult; oval-oblique flattening; atrophy of left side of sacrum; left sacro-iliac ankylosis, incomplete.	Purchased Sent. Dec. 9, 1890.
10094 BC 47 ✓	Plaster cast of female pelvis - adult; spondyliathesis (Kernott); pelvis otherwise normal.	Do. Sent. Dec. 9, 1890.
10095 BC 47 ✓	Plaster cast of female pelvis - adult; somewhat oval-oblique; superior strait & cavity very capacious; left lumbar scoliosis.	Do. Sent. Dec. 9, 1890.
10096 BC 47 ✓	Plaster cast of female pelvis - adult; bilateral dislocation of femur upwards & backwards.	Do. Sent. Dec. 9, 1890.
10097 BC 47 ✓	Plaster cast of female pelvis - adult; dislocation of left femur upwards & backwards, forming a new acetabulum; oval oblique pelvis; sacrum nearly symmetrical; left lumbar scoliosis.	Do. Sent. Dec. 9, 1890.

10098
Aa3

✓

Wax bust of a new born infant, colored after nature; showing a single eye which appears to have been brought into view by dissecting a flap of skin from below upwards; or else the flap is the rudimentary nose. The ears are low down at the side, suggesting the absence of lower jaw or the presence of hydrocephalus; both of which would seem to be negatived by the shape of the chin & head.

Purchased

Cat. Dec. 9, 1890.

10099
A3

✓

Two female infants joined by the pelvis; one umbilicus; one set of external genitals; two well formed lower limbs on one side; the other two are united down to the toes which are separated into two sets. One infant has a double hare-lip.
(Achiopagus)

Do.

Cat. Dec. 9, 1890.

10100
K47

✓

Wax bust of a adult negro, showing extensive scrofuloderma.

Do.

Cat. Dec. 9, 1890.

10101
Ia4

✓

Series of twenty-five (25) wax models, showing diseases of the eye.

Do.

Cat. Dec. 9, 1890.

10102
Bc5

✓

Bones of the left posterior limb, ligamentous; showing a healed angular shot fracture of tibia, middle of shaft. There is also a shot fracture of the posterior part of the neck of the femur. From a rabbit.

Presented by Doctor Hugh^{McB.} Smith

Cat. Dec. 22, 1890.

10103 A 46 ✓	Ovaries, showing cysto-adenoma. From a white woman, aged 34, who died Nov. 20, 1890.	Presented by Doctor T. C. Smith.
		Cat. Dec. 27, 1890
10104 A 46 ✓	Heart & pericardium, showing chronic pericarditis. Pericardial peri- cardium adherent throughout nearly its entire extent. Heart normal otherwise See 10103 for history	Do.
		Cat. Dec. 27, 1890.
10105 A 46 ✓	Portion of lower lobe right lung, showing two large cheesy masses. Inflammation (?) See 10103 for history	Do.
		Cat. Dec. 27, 1890.
10106 A 46 ✓	Lower lobe left lung, showing minute thickenings of pleura, probably incipient cancer. See 10103 for history.	Do.
		Cat. Dec. 27, 1890.
10107 A 46 ✓	Portion of liver, showing large cancer nodule. See 10103 for history.	Do
		Cat. Dec. 27, 1890.

cat. Jan. 5, 1891

10128 Ic 45 ✓	Tongue. Tubercle. Cast of face of woman with protruding tongue; the front & left side of tongue show tubercular ulcers.	Do. 1321
10129 Ic 45 ✓	Tongue. Tubercle. Cast of face of woman with protruding tongue, showing several prominent tubercles of upper surface.	Do. 1319
10130 K 45 ✓	Skin. Tubercular leprosy. Cast of face of man, showing tubercular leprosy of forehead, nose & cheek.	Do. 1296
10131 Bd 45 ✓	Finger. Tubercular scrofula. Cast of palmar surface of right hand. The index finger & its roots in the palm is much swollen, reddened, and shows six oval suppurating patches.	Do. 566
10132 K 45 Bd 44 ✓	Three casts. from an adult showing scrofulo-tuberculosis. One back of right hand; the second cast giving a front view of the nose & adjacent parts of the face; the 3d cast shows the external left ear. Skin. Scrofulo-tuberculosis. Lupus. Joint. Inflammation.	Do. 1150
		Cast. Jan. 5, 1891.

10133 A 44 ✓	Skin. Lichen. East of outer side of left thigh and leg of adult partly flexed, showing dark red irregular patches, varying in size, some of them of bluish tint, not elevated. Several small, moist, brownish crusts.	Purchased from J. Baretta, Paris. 1310
10134 A 44 ✓	Skin. Lichen. East of right side of neck, thorax & shoulder of a woman; large brownish patch on neck, another in axilla, both sprinkled with fine scales. The mammary areola is irregularly prominent and also sprinkled with fine scales.	Do. 1525 Cat. Jan. 5, 1891.
10135 A 44 ✓	Skin. Lichen. East of left hand & forearm of boy, showing small, rounded, yellowish elevations, some with hemorrhagic apex. "Lichen obtusus."	Do. 1435 Cat. Jan. 5, 1891.
10136 A a 3 ✓	Human foetus. Meningocele. Bust of foetus about term, showing large saccular protrusion posteriorly, apparently due to bifid occipital bone and cervical spine. "Foetus cardiacus."	Do. 1434 Cat. Jan. 5, 1891.
10137 A a 3 ✓	Human foetus. Anencephalus. Bust of anencephalus foetus about term; the brain represented by a flat red mass.	Do. 1052 Cat. Jan. 5, 1891.

Penis. Primary syphilis.

Do.

10138
I c 45

East of penis; on the
mucous surface of the retracted prepuce
are two suppurating sores.
"Chancres syphilitiques doubles".

1405

East. Jan. 5, 1891.

Tongue. Primary syphilis.

Do.

10139
I c 45

East of face of
woman with protruding tongue, showing
two suppurating sores, the left one
of large size.
"Chancres syphilitiques".

1081

East. Jan. 5, 1891.

Tongue. Secondary syphilis

Do.

10140
I c 45

East of tongue
of adult, on dorsum of which is a
large whitish patch, like psoriasis.
"Syphilides secondaires".

1223

East. Jan. 5, 1891.

Vulva. Secondary syphilis.

Do.

10141
Md 45
N 46

Skin. Molluscum contagiosum.
East of vulva & adjoining
parts of thighs of an adult.

1271

East. Jan. 5, 1891.

Skin. Secondary syphilis.

Do.

10142
N 45

East of external
genital organs & adjacent portions
of abdomen & thighs of a young
girl; showing swelling, redness, ulcer-
ation & suppuration in patches, es-
pecially in the folds of the skin.

1332

East. Jan. 5, 1891.

10143 N 45 ✓	Skin. Secondary syphilis. East of inner side of left thigh & part of leg of woman, covered with small round red spots; the margins of many of these & centres of others are covered with fine scales, many are elevated Syphilide acnéiforme.	Do. 1292 Cat. Jan. 5, 1891.
10144 N 45 ✓	Skin. Secondary syphilis. East of front of chest of man. Syphilide papuleuse annulaire, Syphilide Secondaire.	Do. 1394 Cat. Jan. 5, 1891.
10145 N 45 ✓	Skin. Secondary syphilis. East of right side of trunk, arm & hip, showing oval, white, corrugated, somewhat elevated patches so-called "scars" consecutive to syphilitic dermatitis.	Do. 1145 Cat. Jan. 5, 1891.
10146 Ic 45 ✓	Tongue. Tertiary syphilis. East of tongue, on dorsum of which is a large gumma.	Do. 1238 Cat. Jan. 5, 1891.
10147 Ic 45 ✓	Tongue. Tertiary syphilis. East of tongue containing gumma deeply imbedded, on the dorsum above the ulcerative openings. The most of the surface of the tongue is covered with a brownish coat. "Gomme profonde".	Do. 1174 Cat. Jan. 5, 1891.

Skin. Tertiary syphilis.

Do.

10148

- 10379 Flat, triangular cast of uterus. Presented by Mr. M. Brewer,
From a white woman, widow, age 38, Asst. Surg. U. S. A.
Mc 5 Department clerk.
✓
Cat. June 6, 1892.
- 10380 Fused kidney, inferior vena cava, Presented by Dr. Geo. H. Kurose.
etc - inflammation.
Ka
Case of Edwin G. - "D", 5th bar.
Pnt., age 69.5 years. Died May
24, 1892.
✓
Cat. June 13, 1892.
- 10381 First lower right molar, showing Presented by Doctor
caries of crown and neck J. T. Daniel.
Ha 44 and wear of crown.
✓
Cat. June 13, 1892.

10382 Da 5	Heart, showing clot, valvular disease, hypertrophy & pericarditis.	Presented by Doctor D. S. Lamb.
✓	Case of Wm B. M., aged 58 years. Died May 26, 1892.	Cat. July 26, 1892.
10383 Gt 41	Middle & lower lobes of right lung - greater part of middle lobe is solid from hemorrhage; the patch measures 3.5 x 3.5 x 2 inches; the pleural surface covered with lymph. From same as preceding spec. no. 10382.	Do. Cat. July 26, 1892.
10384 Gt 41	Lower lobe of left lung, showing hemorrhagic infarction, measur- ing 4 x 3 x 2.5 inches From same as preceding specimens no. 10382 & 10383.	Do. Cat. July 26, 1892.
10385 H 25	Mass of small intestine and mesentery showing many shot lacerations. Case of Pvt. Jas. McD., "D." 15th Inf. Shot in abdomen Dec. 12, 1891. Died in a few minutes.	Presented by Surgeon A. C. Girard, U.S.A. Cat. July 26, 1892.
10386 H a 44	Left 2nd lower molar tooth, showing caries. From a Pigian Indian, aged about 23 years - Extracted June 28, 1892.	Presented by Doctor J. T. Daniel. Cat. July 26, 1892.

- 10387
Ha 43
✓
Left upper 1st molar tooth, showing atrophy and calcareous deposit. From a male Piegan Indian, age about 24. The tooth had become loosened by atrophy of alveolus.
Do.
Cat. July 26, 1892.
- 10388
Aa 46
✓
Flat tumor excised from the neck, below and behind right ear. Presented by Doctor J. W. Bayne.
Case of L. F.
Tumor removed April, 1892, by the donor.
Cat. July 29, 1892.
- 10389
Ac 6
✓
Stump of right forearm, showing amputation in the middle, healing, and reamputation in middle of arm. Presented by Doctor F. L. Johnson.
The man had compound fracture of bones of forearm by a falling window. Dr. Bovee performed 1st operation. Reamputation by Drs. Hamilton Leach and Johnson, June 11, 1892.
Cat. July 29, 1892.
- 10390
Be 5
✓
Head, neck and four inches of the shaft of right femur, showing shot fracture. Osteomyelitis. Presented by Doctor E. M. Scharffer.
- ✓
Case of John Hall, colored, age 50.
Cat. July 29, 1892.
- 10391
Hd 44
✓
Portion of stomach & first part of duodenum. Pylorus narrowed to one inch by oral ulcer. Stomach showed thickening of mucous membrane & hypertrophy of muscular coat, the stomach was much dilated. Presented by Asst. Surg. Chas. E. Woodruff, U.S.A.
From a man aged 30 or 35. Died spring of 1892.
Cat. July 29, 1892.

10392 Ea 45	<p>Mass of mesenteric glands & portion of small intestine, showing tubercle.</p> <p>Case of C.R., colored, male, age 7 years. Died July 25, 1892.</p>	Presented by Doctor S. S. Adams.
		Cat. July 30, 1892.
10393 Ea 45	<p>Mass of bronchial glands with arch of aorta, portions of trachea bronchi, oesophagus, etc. Glands show tubercle. Tubercular deposits on pleura.</p>	Do.
	From same as preceding specimen no. 10392.	Cat. July 30, 1892.
10394 Gb 41	<p>Middle & lower lobes of right lung; pleuritic adhesions between lobes & diaphragm.</p>	Do.
	From same as preceding specimens nos. 10392 & 10393.	Cat. July 30, 1892.

Cat. Oct. 31, 1892.

10418

HE 3

Tongue, larynx, etc., showing a
 bifid uvula.

Presented by Doctor
 E. C. C. Winter.

Case of Mamie W., mulatto, one
 day old, died Aug. 11, 1892.

Cat. Oct. 31, 1892.

10419

Ma 3

Utrino-genital organs of female
 infant, one day old, showing
 dilatation of left ureter. No
 appreciable cause.

Do.

From same as preceding no
 10418.

Cat. Oct. 31, 1892.

10420

Ma 46

Left ovary, converted into a
 cyst size of a man's head -
 (Sarcoma)

Presented by Doctor
 J. Taber Johnson.

Case of Mrs. W. white, age 51,
 married, 5 children; ceased
 menstruating at 44. Ovariectomy
 by Dr. J. Taber Johnson. Recovered.

Cat. Oct. 31, 1892.

10421

Ma 46

Uterus, right ovary, etc - ovary
 converted into a sarcomatous
 growth, which has degenerated.

Presented by Doctor
 E. F. King.

Case of Mrs. Eliza J. W., white,
 age 57 - married. Died Sept. 24,
 1892.

See 10420 for history

Cat. Oct. 31, 1892.
